This work was prepared as one task of a competitively awarded contract; the total amount of the contract is \$3,572,604.

This report was prepared by Suzanne Smolkin of Mathematica Policy Research, Inc. for the U.S. Department of Agriculture's Food and Consumer Service, Office of Analysis and Evaluation. Many individuals made important contributions to the report. The author thanks Nancy Heiser, Carole Trippe, and Harold Beebout for providing guidance and reviewing the report, Kristin Porter for providing programming support, and Deborah Patterson for preparing the manuscript. The author also thanks Jenny Genser and Alana Landey of the U.S. Department of Agriculture's Food and Consumer Service for providing guidance and program information.

This work was prepared as one task of a competitively awarded contract; the total amount of the contract is \$3,572,604.

EXECUTIVE SUMMARY

The Food Stamp Program (FSP) provides millions of Americans with the means to purchase food for a nutritious diet. The FSP is the largest of the 15 domestic food and nutrition assistance programs administered by the U.S. Department of Agriculture's Food and Consumer Service (FCS). In an average month in fiscal year 1993, the FSP served approximately 27.0 million persons. This report presents the characteristics of food stamp households nationwide in summer (July and August) 1993 based on FSP household data for those two months collected by FCS for quality control purposes.

FSP Participation and Costs

In each month of summer 1993, the FSP provided benefits to an average of 27.3 million persons living in 10.9 million households across the United States. The total cost for the program over fiscal year 1993 was \$23.7 billion, \$22.0 billion of which were for food stamp benefits. The average monthly food stamp benefit per household in summer 1993 was \$170. Compared with summer 1992, the level of FSP participation increased 6 percent, and FSP benefit costs increased approximately 5 percent.

Characteristics of Food Stamp Households and Participants

In summer 1993, slightly over half of all food stamp participants were children, 42 percent were nonelderly adults, and 7 percent were elderly persons. About 60 percent of the children were school age, and two-thirds of the adults were women.

Almost all (91 percent) of the food stamp households lived in poverty, according to the 1993 poverty guidelines issued by the Department of Health and Human Services (see appendix D). Food stamp benefits were concentrated among poorer households: while the gross income of 42 percent of all food stamp households was less than or equal to half of the poverty guideline, they received 57 percent of all benefits. If the value of food stamps is included as income, 7 percent of all food stamp households moved above the poverty guideline as a result of receiving food stamps, and 26 percent moved from below to above half of the poverty guideline.

Of all food stamp households, 82 percent contained either a child or an elderly or disabled person, and these households received 89 percent of all benefits. Households with children received a relatively large average monthly food stamp benefit (\$224), reflecting their relatively large average household size (3.4 persons, compared with 2.6 persons on average overall). Most of the food stamp households with children were single-parent households, and the majority of these single-parent households received support from Aid to Families with Dependent Children (AFDC). About one-quarter of food stamp households with children had earned income; 19 percent of single-parent households and 49 percent of multiple-adult households with children had earnings.

Almost three-quarters (72 percent) of food stamp households with an elderly member consisted of an elderly person living alone. These individuals received an average benefit of \$45. The average food stamp benefit for all households containing an elderly person was \$66, reflecting their smaller-than-average household size.

Characteristics of Food Stamp Households Also Receiving AFDC or GA Benefits

In an average month in fiscal year 1993, approximately 5 million food stamp households (47 percent of the entire food stamp caseload) received public assistance benefits from either the Aid to Families With Dependent Children (AFDC) program or the General Assistance (GA) program. These households had an average gross monthly income of \$474 and received an average food stamp benefit of \$170 per month.

Almost 40 percent of food stamp households received AFDC benefits. Compared with other food stamp households, FSP/AFDC households were poorer and they received higher food stamp benefits. On average, FSP/AFDC households had a gross income that was 49 percent of the poverty guideline and they received a monthly food stamp benefit of \$232. In contrast, other food stamp households had an average gross income that was 61 percent of the poverty guideline and received an average monthly food stamp benefit of \$129.

Almost all FSP/AFDC households contained children (98 percent) and most (75 percent) were single-mother households with children. Single-mother food stamp households that also participated in the AFDC program are currently of particular interest not only because they make up a considerable percentage of the FSP caseload, but also because they are central to the welfare reform debate. On average, these households had a gross monthly income of \$457, and they received a monthly AFDC benefit of \$368. They also received an average food stamp benefit of \$224 each month.

Approximately 8 percent of the food stamp caseload received GA benefits, and these households received an average GA benefit of \$233. FSP/GA households had an average gross income of \$348 per month, and they received an average monthly food stamp benefit of \$120, reflecting their small sizes. Almost 80 percent of FSP/GA households contained an adult living alone, and in the majority of these households the adult was male.

CHAPTER 1: INTRODUCTION

The Food Stamp Program (FSP) is a central component of America's antipoverty program. The major purpose of the FSP is "to permit low-income households to obtain a more nutritious diet . . . by increasing their purchasing power" (The Food Stamp Act of 1977, as amended, P.L. 95-113). The FSP is the largest of the domestic food and nutrition assistance programs administered by the U.S. Department of Agriculture's Food and Consumer Service (FCS). During fiscal year 1993, the FSP served approximately 27.0 million persons in an average month at a total annual cost of \$23.7 billion.

The FSP is the only low-income assistance program that is made available nationwide to essentially all financially needy households without imposing nonfinancial categorical criteria, such as whether households contain children or elderly persons. The FSP is also unique in that it provides benefits in the form of coupons. Food stamp coupons can be redeemed for food in any of over 200,000 authorized stores across the Nation.

The Federal Government and State and local governments share the costs and administration of the FSP. The U.S. Congress authorizes the FSP and appropriates necessary funds, while the U.S. Department of Agriculture establishes FSP regulations pursuant to the Food Stamp Act of 1977 as amended. FCS administers the FSP nationally, while State and local welfare agencies operate the program locally. The Federal Government fully funds the benefits of the FSP. Administrative costs are shared by the cooperating agencies, with FCS usually paying 50 percent of the costs.

Since food stamps are available to all persons who meet the income and resource standards set by Congress, the FSP serves a broad spectrum of needy persons. Using FSP household data, which FCS periodically collects for quality control review purposes, FCS produces a series of reports (see appendix K for list of titles) that present food stamp household characteristics to enhance an understanding of those served by the program. This report presents a picture of households and individuals participating in the FSP in summer 1993.

Chapter 2 provides an overview of the FSP and the regulations used to determine eligibility and food stamp benefits, as well as the factors that affect program participation and costs, such as legislative changes and trends in the national economy. Chapter 3 describes the characteristics of individuals and households participating in the FSP in summer 1993. Chapter 4 looks at the characteristics of food stamp households also receiving AFDC or GA benefits in fiscal year 1993. The appendices include supplemental tables, detailed tabulations of household characteristics for the Nation and by State, and a brief description of the sample design and the sampling error associated with the estimates.

CHAPTER 2: AN OVERVIEW OF THE FOOD STAMP PROGRAM

The characteristics of food stamp households and the level of FSP participation change over time in response to economic and demographic trends and to legislative changes in eligibility requirements. This chapter begins by explaining FSP eligibility requirements, application procedures, benefit computation, and food stamp issuance. The chapter then describes how the program changed from summer (July and August) 1992 to summer 1993 and concludes with a summary of program participation and costs and their relationship to the economy in fiscal year 1993.

PROGRAM ELIGIBILITY REQUIREMENTS

The Food Stamp Act of 1977, as amended, establishes uniform national eligibility standards for the FSP and defines the basic FSP unit, the "household." The eligibility criteria include gross and net income limits, an asset limit, and various nonfinancial criteria. Some exceptions to these uniform standards exist for certain high-cost areas, such as Alaska and Hawaii, and for certain individuals such as elderly persons (age 60 and over) and disabled persons. Below, we discuss the FSP's definition of a household and its eligibility criteria.

The Household

In general, individuals who live in a residential unit and purchase and prepare food together constitute a household as defined in the FSP. The income and assets of each household member are aggregated to determine eligibility and benefits. Individuals who live together in a residential unit but do not purchase and prepare food together can apply as separate household units; thus, their income and assets are considered separately in eligibility and benefit determinations, with some exceptions. Special provisions allow elderly and disabled persons who cannot prepare and purchase food because of a substantial disability to apply as a separate household as long as the gross monthly income of the remainder of their residential unit is less than 165 percent of the official Federal Government poverty guidelines.¹ Groups that were always considered one household in fiscal year 1993 regardless of their food purchasing and preparation arrangements included married couples, parents and their minor children, childless individuals living with their nonelderly parents, and childless nonelderly individuals living with their childless nonelderly siblings.

Income Eligibility Standards

Monthly income is the most important determinant of a household's FSP eligibility. The majority of households that apply for food stamps must meet two income eligibility standards--a gross income standard and a net income standard. As defined in the Food Stamp Act of 1977, as amended, gross income includes most cash income (with the exception of specific types of income such as loans) and excludes most noncash income, or in-kind benefits. The specific standards are identified below.

¹Federal Government poverty guidelines for many assistance programs are established annually by the Secretary of the U.S. Department of Health and Human Services.

First, the gross monthly income of all households without an elderly or disabled member must be at or below 130 percent of the poverty guideline (\$1,512 for a family of four in the contiguous United States in fiscal year 1993). Households that contain elderly and disabled members are not subject to the gross income test. Second, all households must meet a net income eligibility standard, defined as net monthly income at or below 100 percent of the poverty guideline (\$1,163 for a family of four in the contiguous United States in fiscal year 1993). Net income is determined by subtracting deductions permitted under the FSP from monthly gross income. Both the gross and net income eligibility standards are established for various household sizes (appendices D and E). Households are exempt from these income tests, as well as the asset test, if all members of a household receive Aid to Families with Dependent Children (AFDC) income, State General Assistance (GA), or Supplemental Security Income (SSI).

The FSP deducts the following from a household's gross monthly income to arrive at the net monthly income²:

- **Standard deduction.** All households automatically received a standard deduction equal to \$127 in the contiguous United States and the District of Columbia in fiscal year 1993. The standard deduction for outlying States and territories varies to reflect price differences between these areas and the contiguous United States (appendix F). The standard deduction amounts are adjusted annually to reflect changes in the cost of living.
- **Earned income deduction.** Households with earnings receive an earned income deduction equal to 20 percent of the combined earnings of household members.
- **Dependent-care deduction.** Households with dependents receive a dependent-care deduction for expenses involved in caring for children and other dependents while household members work, seek employment, or go to school. The maximum dependent-care deduction for households with dependents was \$160 per dependent per month in fiscal year 1993.
- **Medical deduction.** A medical deduction is available only to households that contain elderly or disabled members. These households can deduct all medical costs incurred by the elderly or disabled person that exceed \$35. Medical expenses reimbursed by insurance or government programs are not deductible. If a household contains more than one disabled or elderly person, then it can deduct the combined medical expenses for those disabled or elderly persons that exceed each elderly or disabled person's initial \$35 expense.
- **Excess shelter expense deduction.** All households are entitled to an excess shelter expense deduction equal to shelter costs (such as rent, mortgage payments, utility

²There is a distinction between a household's deduction entitlement and the amount actually used to compute food stamp benefits. The entitlement is the deduction that a household would receive on the basis of its earned income and dependent-care, shelter, and medical expenses if the total of these allowable deductions was less than its gross income. Because net income cannot be less than zero, households with total deductions greater than their gross incomes could only claim a portion of their deduction entitlement.

bills, property taxes, and insurance) that exceed 50 percent of a household's countable income after all other potential deductions are subtracted from gross income. This deduction is subject to a limit except for households that contain elderly or disabled members, which are entitled to subtract the full value of shelter costs that exceed 50 percent of their adjusted income. The limit on the excess shelter expense deduction for households without elderly or disabled members for fiscal year 1993 was \$200 for the contiguous United States and the District of Columbia. The excess shelter expense deduction for outlying States and territories varies to reflect price differences between these areas and the contiguous United States (appendix F). The deduction limit is adjusted annually to reflect changes in the cost of housing.

Assets

The second most important determinant of FSP eligibility is a household's assets. Most households are permitted up to \$2,000 in countable assets; however, households that contain elderly persons are allowed up to \$3,000. Countable assets include cash, assets that can easily be converted into cash (such as money in checking or savings accounts, savings certificates, stocks or bonds, and lump-sum payments), and nonliquid resources. However, selected pieces of property such as family homes, tools of a trade, or business property used to earn income are not counted. Assets also do not include vehicles used to produce income or to transport disabled persons. Vehicles not used for these purposes are counted in the following way: for the first vehicle and vehicles used to commute to work, any fair market value exceeding \$4,500 is counted; for all other vehicles, the higher of either any fair market value in excess of \$4,500 or any equity is counted.

Nonfinancial Eligibility Standards

While the FSP does not impose categorical eligibility standards, some specific nonfinancial restrictions are placed on the participation of aliens, students, strikers, and persons who are institutionalized. In addition, able-bodied food stamp participants are required to register for work and accept suitable employment. The following individuals are exempt from this work registration requirement:

- Persons younger than age 16 or older than age 59
- Persons who are physically or mentally disabled
- Caretakers of dependent children younger than age 6 or of incapacitated adults
- Persons who work at least 30 hours per week
- Persons subject to the work requirements of the AFDC program
- Persons who receive unemployment insurance
- Persons ages 16 and 17 who are not household heads or who are attending school
- Persons in drug addiction or alcoholic treatment and rehabilitation programs

- Students enrolled in school at least half-time

Since April 1987, most work registrants have been required to participate in State Employment and Training (E&T) programs, which provide work experience, educational programs, and job search training. Not all work registrants are required to participate in E&T programs, however. For example, States may exempt pregnant women and persons living in areas where E&T programs are not available.

APPLICATION PROCEDURES

To apply for food stamps, individuals are required to appear in person at their local food stamp offices. However, elderly and disabled persons and persons who have transportation problems can be interviewed by telephone or at their homes. All States must allow individuals to apply for food stamps when they apply for AFDC. Individuals applying for SSI benefits can simultaneously apply for food stamps.

The Food Stamp Act of 1977, as amended, requires that local offices process applications for food stamps within 30 days after their receipt. However, households without significant income or resources can receive expedited food stamp eligibility verification and acquire food stamp benefits within 5 calendar days after they apply. Those eligible for expedited service include (1) homeless persons, (2) migrant or seasonal farm workers with assets equal to or less than \$100, (3) households with gross income equal to or less than \$150 and assets equal to or less than \$100, and (4) households with shelter costs that exceed their gross income and assets combined.

FSP participants are required to appear in person at their local food stamp offices periodically for recertification. The certification period varies according to the likelihood of a change in a food stamp household's financial circumstances. In summer 1993, a food stamp household was certified for food stamps for an average of 10 months.

BENEFIT COMPUTATION

After a household is certified for food stamps, its monthly food stamp benefit is computed on the basis of its net monthly income, the benefit reduction rate, and the maximum food stamp benefit for its household size and location. The maximum benefit to which a household is entitled is based on the June cost of the Thrifty Food Plan (TFP) for a family of four, adjusted for different household sizes and geographic areas outside the contiguous United States. The cost of the TFP is based on an economical and nutritious diet, adjusted for household size and composition. Maximum benefits are revised annually to reflect changes in the cost of the foods included in the TFP. As specified in the Food Stamp Act of 1977, as amended, the maximum benefit was 100 percent of the TFP through 1988, 100.65 percent in 1989, 102.05 percent in 1990, and 103 percent in 1991 and 1992. In 1993 an additional amendment to the act required that maximum benefit amounts in 1993 in the continental U.S. remain constant at 1992 values despite a drop in the value of the TFP in June of 1992. Thus, in summer 1993 (and summer 1992), the maximum monthly benefit for a family of four in the contiguous U.S. was \$370 (appendix G).

The benefit reduction rate is the rate at which benefits are reduced for every additional dollar of net income. The benefit reduction rate is 30 percent, reflecting the assumption that a household will

spend 30 percent of its net income on food, and that the FSP will provide the difference between that amount and the maximum benefit. Thus, benefits are reduced by 30 cents for every additional dollar of net income.

A household's monthly food stamp benefit is computed by subtracting 30 percent of its net income from the maximum benefit. If a household has zero net income, it receives the maximum food stamp benefit. All eligible one- and two-person households are guaranteed a minimum benefit of at least \$10 per month (except during the initial month of participation). For new participants, benefits are prorated for the first month.

FOOD STAMP ISSUANCE

Local and State food stamp offices use various systems to provide food stamp benefits to food stamp participants. The following are the four main methods of issuance:

- **ATP card system.** An authorization to participate identification card (ATP card) is mailed to the participant each month; the participant then exchanges the card for food stamps at an authorized issuance office.
- **Mail system.** State and local offices mail the food stamps directly to the participant.
- **Manual system.** The FSP participant obtains food stamps directly from the food stamp office.
- **Electronic benefit transfer.** The FSP participant receives a "debit" card, similar to a bank card, which is used when making food purchases at authorized retail stores. The household's monthly benefit is electronically transferred to a benefit account created specifically for FSP benefits. When a purchase is made, the amount of the purchase is debited electronically from the household's FSP account.

PROGRAM CHANGES SINCE THE PREVIOUS FISCAL YEAR

The following two pieces of legislation went into effect in fiscal year 1993 and had an impact on the FSP:

- The Higher Education Amendments of 1992 (P.L. 102-325) excluded all Title IV payments and Bureau of Indian Affairs educational assistance from being counted as income when determining FSP eligibility and food stamp benefit amounts.
- An amendment to the Food Stamp Act of 1977 (P.L. 102-351) prevented a reduction in maximum food stamp benefit allotments for 1993 despite a decrease in the value of the Thrifty Food Plan in 1992.

FSP PARTICIPATION AND COSTS

After declining steadily from 1983 to 1989, FSP participation increased substantially in the early 1990s. As illustrated in Figure 2.1, FSP participation increased by 13 percent between 1990 and 1991, and by 12 percent between 1991 and 1992. In fiscal year 1993, FSP participation continued to increase, but at a slower rate than in 1991 and 1992. In 1993, the FSP served 27.0 million persons on average each month, a 6 percent increase from 1992. FSP participation has leveled off in 1994, serving almost the same number of persons in August 1994 (27.3 million) as in August 1993 (27.2 million persons).

The increase in FSP participation beginning in 1989 and continuing through 1993 was associated with the economic recession that began in 1990. Major economic indicators for most of this period portray a downturn in the economy (table 2.1). For example, the unemployment rate rose from 5.5 percent in 1989 to 7.4 percent in 1992, and the poverty rate increased from 12.8 percent in 1989 to 15.1 percent in 1993. Similarly, growth in the Gross Domestic Product and productivity slowed through 1992. However, the unemployment rate dropped slightly in 1993 (to 6.8 percent) and the Gross Domestic Product and productivity grew during 1992 and 1993, indicating improvements in the overall economy. Despite these improvements, however, FSP participation and poverty continued to rise during 1993, reflecting continued hardship for those with the lowest incomes.

Along with FSP participation, FSP costs also rose between 1992 and 1993. The total cost of the FSP in 1993 was \$23.7 billion, an increase of 5.5 percent over FSP costs in 1992. Total costs included \$22 billion dollars for benefits, \$1.5 billion for State administrative costs, and \$226 million for E&T program costs and other expenses. A substantial portion of the increase in costs was due to an increase of 5 percent in total FSP benefits.

CHAPTER 3: CHARACTERISTICS OF FOOD STAMP HOUSEHOLDS AND PARTICIPANTS

The FSP serves the nutritional needs of a broad spectrum of low-income Americans.¹ In each month in summer 1993, the FSP provided benefits to an average of 27.3 million persons living in 10.9 million households.² Almost all food stamp households lived in poverty (according to the official Federal Government poverty guidelines used for program eligibility in fiscal year 1993). The vast majority of food stamp households contained either a child (under age 18), an elderly person (over age 59), or a disabled person. The average food stamp household received a monthly food stamp benefit of \$170, had an average gross monthly income of \$501 and an average net monthly income of \$268, was entitled to an average total deduction of \$262 a month, and had an average household size of 2.6 persons. This chapter elaborates on the economic status of food stamp households and discusses the composition of food stamp households, the characteristics of food stamp participants, and changes in the characteristics of food stamp households between summer 1992 and summer 1993.

THE POVERTY STATUS OF FOOD STAMP HOUSEHOLDS³

The FSP provides benefits to households in need. As shown in table 3.1, the gross monthly income of 91 percent of food stamp households in summer 1993 was less than or equal to 100 percent of the Federal Government poverty guidelines (appendix E). The gross monthly income of two-thirds of all food stamp households was less than or equal to 75 percent of the poverty guideline, and the income of 42 percent of all food stamp households was less than or equal to 50 percent of the poverty guideline.

The FSP effectively targets benefits to the most needy households. That is, poorer households receive larger food stamp benefits than do households with more income. As shown in table 3.1, while only 42 percent of all food stamp households had a gross monthly income below 51 percent of the poverty guideline, they received 57 percent of all benefits. In contrast, the households that had gross monthly income over the poverty guideline, which accounted for 9 percent of all food stamp households, received only 3 percent of all benefits.

¹The information discussed in this chapter and the estimates in appendix A are based on a sample of 9,504 households that participated in the FSP in summer 1993. The sample was drawn from food stamp households in the 50 States, the District of Columbia, Guam, and the Virgin Islands. Households in Puerto Rico and the Northern Mariana Islands were not included in the sample because Puerto Rico has its own Nutritional Assistance Program which replaced the FSP there in July 1982, and the Northern Mariana Islands participate in another block grant program instead of the FSP.

²Based on the sample, 28.2 million persons were served by the FSP in summer 1993 (as presented in appendix A). This figure differs from the number of food stamp participants according to FCS administrative records, 27.3 million persons, because the sample estimate is weighted by households rather than by individuals (see appendix H).

³For more information on the economic status of food stamp households, see appendix tables A-3 through A-8.

Table 3.1--Distribution of Households and Benefits by the Poverty Guideline, Summer 1993

Gross Income as a Percentage of Poverty Guideline ^a	Percentage of:	
	All Households	All Benefits
Total^b	100.0	100.0
25% or less	17.1	21.1
26-50	24.6	36.0
51-75	25.4	27.7
76-100	24.2	12.1
101-130	8.1	3.1
131 or more	0.6	0.0

^bDue to rounding, the sum of individual categories may not match the table total.

Source: Summer 1993 Food Stamp Quality Control sample.

To estimate the impact of food stamps on a household's purchasing power, we can add the dollar value of the food stamps to household income and then examine the distribution of households by poverty status.⁴ As shown in table 3.2, the combination of cash and food stamps--an alternative measure of gross income that includes food stamp benefits--yields a significantly different distribution of food stamp households by poverty status. Specifically, the alternative measure of income sufficiently increased the income of food stamp households to move 7 percent of them above the poverty guideline. Food stamp benefits had an even greater impact on the poorest households, moving 26 percent of food stamp households above 50 percent of the poverty guideline.

HOUSEHOLDS WITH SPECIAL NEEDS

While the FSP does not restrict eligibility for food stamps to certain individuals, it effectively serves many households that contain persons with special needs--that is, children and elderly or disabled persons.⁵ In summer 1993, 82 percent of all food stamp households contained either a child, an elderly person, or a disabled person. These households received 89 percent of all food stamp benefits. This section describes the characteristics of food stamp households containing children, elderly persons, or disabled persons.

Households with Children

In summer 1993, the FSP served approximately 14 million children each month, representing over half of all participants. Of all food stamp households, 62 percent contained children (table 3.3). Compared with other food stamp households, the ones that contained children received a relatively high average food stamp benefit of \$224 per month (table 3.4). This relatively high benefit value primarily reflects the relatively large average size of food stamp households that contained children (3.4 persons).

Children who received food stamps in summer 1993 tended to live in households headed by single parents and tended to receive AFDC benefits in addition to food stamp benefits. Of all food stamp households with children, 67 percent were headed by a single parent, representing almost half (42 percent) of all food stamp households. Since the AFDC program serves predominantly single-parent families, a large percentage (74 percent) of these single-parent food stamp households also received AFDC. Approximately a fifth of the single-parent food stamp households had earnings.

A substantial proportion (18 percent) of food stamp households contained multiple adults and children, representing 28 percent of all food stamp households with children.⁶ The characteristics of multiple-adult households with children varied considerably from those of single-adult households with children. The average monthly food stamp benefit for single-adult households with children was lower than that of multiple-adult households with children (\$212 versus \$265) because of their smaller average household size (3.0 versus 4.6 persons). However, the average monthly per-person benefit

⁴This comparison assumes that program participants value their food stamp benefits at face value.

⁵Elderly persons and disabled persons represent two distinct groups. Elderly persons are persons age 60 years or older. Disabled persons are persons under age 60 who receive SSI.

⁶In multiple-adult households with children, the second adult may not necessarily be a parent. He or she may be an adult child of the head, a grandparent, or even an unrelated member.

Source: Summer 1993 Food Stamp Quality Control sample.

was higher for persons in single-adult households with children compared with persons in multiple-adult households with children (\$71 versus \$58, respectively) because single-adult households were poorer. Single-adult households with children had substantially lower gross monthly incomes (\$498 versus \$797). Of all multiple-adult households with children, 49 percent received income from earnings, 46 percent received AFDC, 60 percent received income from other sources, and 4 percent had no income from any source. Households with children constituted 82 percent of all food stamp households with earnings.

Households With Elderly Persons

In summer 1993, the FSP served 2.0 million elderly persons. Food stamp households containing elderly members represented 16 percent of all food stamp households. These households received an average food stamp benefit of \$66 per month.

Elderly persons who received food stamps tended to live alone, and thus received relatively small food stamp benefits. In summer 1993, 72 percent of all food stamp households with elderly members were single-person households. These single elderly participants received an average food stamp benefit of \$45 per month compared with \$120 in benefits for households with elderly persons not living alone. Elderly persons not living alone lived in households averaging 2.6 persons.

Food stamp households that contained elderly persons tended to receive SSI and Social Security income. In summer 1993, 59 percent of all food stamp households with elderly members received SSI, 71 percent received Social Security, and 38 percent received both SSI and Social Security income. Food stamp households with elderly members represented 47 percent of food stamp households with SSI and 62 percent of food stamp households with Social Security income.

Households With Disabled Persons

In summer 1993, households that contained disabled persons represented 11 percent of all food stamp households. By definition, households with disabled members receive SSI⁷. In summer 1993, these households received an average monthly food stamp benefit of \$114.

Similar to households with elderly members, households containing a disabled person living alone received a lower average monthly food stamp benefit than did households that contained disabled persons not living alone (\$50 compared with \$164). Over 40 percent of all food stamp households that contained disabled persons were single-person households, while almost 60 percent were multiple-person households. Again, the difference in benefits between the two groups reflects differences in average household size. Disabled persons who did not live alone lived in households averaging 3.6 persons.

⁷The FSP considers persons disabled if they receive disability income from either SSI, GA, Social Security, Railroad Retirement, or several other sources. Using the Food Stamp Quality Control sample, however, only persons receiving disability income from SSI are identifiable. Thus, disabled persons in this report are defined as persons who receive SSI, but are not elderly.

Other Households Served by the FSP

The FSP serves other needy households besides those that contain children, elderly persons, or disabled persons. In summer 1993, 18 percent of all food stamp households consisted solely of one or more nonelderly, nondisabled adults. These households received an average food stamp benefit of \$106 per month. They tended to be single-person households (84 percent) and represented the majority (69 percent) of households that received General Assistance (GA).

Of all food stamp households in summer 1993, 32 percent consisted of individuals who lived alone. Because these households only contained one individual, the average monthly food stamp benefit was only \$70. Most of these individuals (57 percent) were female, and 36 percent were elderly. Compared with all food stamp households, a relatively small proportion of food stamp participants living alone received earnings (7 percent), and a relatively high proportion had zero gross income (20 percent).

CHARACTERISTICS OF FSP PARTICIPANTS

The FSP serves a broad spectrum of individuals. In summer 1993, more than half were children (less than 18 years old), 42 percent were nonelderly adults (between ages 18 and 59), and 7 percent were elderly persons.⁸ Approximately 61 percent of the children served by the FSP were school age (between ages 5 and 17). Seventy-one percent of elderly adults and 68 percent of nonelderly adults were female. The majority (73 percent) of nonelderly adult food stamp participants lived in households with children--approximately half were single parents, and approximately half lived in households containing at least one other adult and one child.

With the exception of certain groups of individuals, such as caretakers of small children and people working at least 30 hours a week, all able-bodied nonelderly adult food stamp participants are required to register for work and accept suitable employment as a condition of receiving food stamps. Similar to participants in the FSP, participants in other assistance programs also often are required to register for work. In summer 1993, 27 percent of all food stamp household heads were registered for work under the FSP or another assistance program.⁹ Most (70 percent) food stamp household heads were exempt from work registration requirements--19 percent were disabled, 12 percent were younger or older than the required ages, 22 percent were the caretakers of a child or an incapacitated adult, 10 percent were already employed full time, and 8 percent were exempt for other reasons.

⁸For more information on FSP participants and household heads, see appendix tables A-24 and A-27 through A-30.

⁹Reports in this series prior to summer 1989 included as work registrants only persons required to register for work under the FSP; the summer 1989 through summer 1993 reports include as work registrants food stamp participants registered for work under the FSP and food stamp participants registered for the Job Opportunities and Basic Skills (JOBS) program. For more information on the work registration status of food stamp participants and household heads, see appendix table A-29.

CHANGES IN THE CHARACTERISTICS OF FOOD STAMP HOUSEHOLDS AND INDIVIDUALS

The number of households receiving food stamps increased between summer 1992 and summer 1993 by 7 percent.¹⁰ During this time, many of the characteristics of food stamp households remained constant or changed only slightly.¹¹ For example, the percentage of households with children remained at 62 percent between summer 1992 and summer 1993, and the percentage of households with an elderly person increased only slightly from 15 percent to 16 percent. The percentage of households with only one member decreased from 34 percent to 32 percent, and the average size of food stamp households increased from 2.5 persons to 2.6 persons. The change in the percentage of households that were headed by a Hispanic person was more substantial, increasing from 13 percent to 16 percent.

On average food stamp households were slightly better off financially in summer 1993 than in summer 1992 (table 3.5). Both the average gross and average net incomes of food stamp households increased slightly in real dollars from summer 1992 to summer 1993, with both rising by approximately 1 percent. In addition, the percentage of households with zero gross income fell from 10 percent to 9 percent, while the percentage of households with zero net income remained constant at 23 percent. The percentage of households that had gross incomes that were below the poverty guideline declined from 92 percent to 91 percent. The percentage of households that had earned income rose slightly from 20 percent to 21 percent.

Both the average food stamp benefit and the value of the maximum food stamp benefit, in real dollars, decreased by about 2 percent from summer 1992 to summer 1993. The percentage of households receiving the maximum benefit, however, remained constant over that time, as did the percentage of households receiving the minimum benefit.

¹⁰For more information on trends in the characteristics of food stamp households, see appendix tables A-31 and A-32.

¹¹This analysis is based on cross-sectional samples from summer 1992 and summer 1993. Thus, whether changes in the characteristics of food stamp households reflect changes in the circumstances of continuing participants, of new participants, or both is not known. In addition, the differences may be the result of several factors including FSP legislation, changes in the economy, or changes in other social programs.

CHAPTER 4: CHARACTERISTICS OF FOOD STAMP HOUSEHOLDS ALSO RECEIVING AFDC OR GA BENEFITS

This chapter describes the characteristics of food stamp households that also participate in one of two social welfare programs offered in their State: Aid to Families with Dependent Children (AFDC) and General Assistance (GA). These programs provide cash assistance to needy families and persons. The AFDC program provides benefits to needy families with dependent children to help them cover the cost of food, shelter, clothing, and other basic necessities. The AFDC program currently operates in all 50 States, the District of Columbia, Guam, and the Virgin Islands, with each area determining its own income limits and benefit levels within federal guidelines. GA is an all-encompassing term for State and local programs that provide assistance to low-income persons who are not eligible for the AFDC program or the Supplemental Security Income (SSI) program (a program that provides benefits to needy elderly and disabled persons). GA programs operate in most, but not all, States.

In an average month in fiscal year 1993 (FY93), approximately 5 million food stamp households (47 percent of the entire food stamp caseload) received public assistance benefits from either the AFDC program or the GA program (table 4.1).¹ Almost 40 percent of food stamp households received AFDC benefits, and these households received over half (54 percent) of all food stamp benefits. Only 8 percent of food stamp households received GA benefits, and due to their relatively small size, these households received only 5 percent of all food stamp benefits. Since there were 5 times as many food stamp households participating in the AFDC program as in the GA program, this chapter focuses on food stamp households receiving AFDC benefits. Characteristics of food stamp households receiving GA benefits are discussed at the end of the chapter.

FSP/AFDC HOUSEHOLDS

Economic Characteristics

In an average month in FY93, 4.3 million food stamp households participated in the AFDC program. These households received an average monthly food stamp benefit of \$232 and an average monthly AFDC benefit of \$375 (table 4.2). Compared with other food stamp households, FSP/AFDC households were poorer and received higher food stamp benefits. Specifically, FSP/AFDC households' gross income was 49 percent of the poverty guideline, on average, compared with other food stamp households' gross income, which was 61 percent of the poverty guideline on average. FSP/AFDC households' average monthly food stamp benefit of \$232 was substantially higher than that of other food stamp households (\$129). Their higher food stamp benefits reflect their poverty status as well as their large households; on average, FSP/AFDC households contained 3.3 persons compared with 2.1 persons in other food stamp households.

¹The estimates presented in this chapter and in the detailed tables found in appendix B are monthly averages based on all 12 months of the Food Stamp Quality Control fiscal year 1993 database, a sample of 56,822 households. In contrast, the analysis in the rest of the text and in the appendix A tables are based only on the July and August sample of 9,504 households. Therefore, estimates presented in this chapter differ slightly from those in the preceding chapter.

Table 4.1 -- Distribution of Participating Households, Persons, and Benefits by Public Assistance Status, 1993

Public Assistance	Food Stamp Households		Food Stamp Participants in Households With Public Assistance Status		Food Stamp Benefits	
	Number (000)	Percent	Number (000)	Percent	Dollars (000)	Percent

Demographic Characteristics

Almost all FSP/AFDC households contained children (98 percent),² and most (75 percent) were single-mother households with children (table 4.3).³ In contrast, 39 percent of food stamp households not participating in the AFDC program contained children, and only 17 percent were single-mother households with children. Single-mother households participating in the FSP and the AFDC program are of particular interest not only because these households make up a considerable percentage of the total FSP caseload, but also because they are central to the current welfare reform debate. Therefore, these households are discussed in detail in the next section.

Households with children that also contained more than one adult represented one-fifth of all FSP/AFDC households (appendix table B-4). These households were considerably less likely to contain a married couple than their non-AFDC counterparts (60 percent and 81 percent, respectively). Instead, they were more likely to contain a female household head and her parent or other adult relative. In approximately half of the multiple-adult FSP/AFDC households with children, every member of the household participated in the AFDC program.⁴

Food stamp household participation in the AFDC program varied by geographic location (appendix table B-5). Food stamp households located in urban areas were more likely to receive AFDC benefits than food stamp households in rural areas, and households located in the western region of the country were more likely to receive AFDC benefits than households in other regions. Specifically, 42 percent of food stamp households located in urban areas received AFDC benefits, compared with only 32 percent of those in rural areas, and almost half of the food stamp households in the West received AFDC, compared with 42 percent in the Northeast and Midwest, and 32 percent in the South.

Single-Mother FSP/AFDC Households

In an average month in FY93, 4.2 million food stamp households (39 percent of the entire caseload) were single-mother households with children (table 4.3). These households contained 12.9 million participants (47 percent of all FSP participants) and received half of all food stamp benefits (appendix table B-6). Single-mother food stamp households received high food stamp benefits relative to the entire food stamp caseload (\$216 and \$170, respectively), reflecting their relatively large average size (3.0 persons compared with 2.6 persons for all food stamp households), and low incomes relative to the poverty guideline (table 4.4).

Three of every four single-mother food stamp households received AFDC benefits, averaging \$368 per month. Single-mother FSP/AFDC households had nearly the same household size (3.0 persons) and the same average number of children (2.0 children) as single-mother food stamp households not receiving AFDC benefits. However, the two groups differed markedly from each other in several

²It is likely that the remaining 2 percent of households that receive AFDC do have children, although the information about those children is missing from the IQCS data.

³A single mother is defined as a female older than age 17 living with children and no other adults.

⁴Although the AFDC program serves mostly single-parent households, AFDC-UP targets two-parent households in which at least one parent is unemployed.

Table 4.3 -- Distribution of Participating Households by AFDC Status and Household Composition, 1993

Household Composition	All Households		Households With AFDC		Households With no AFDC	
	Number (000)	Percent	Number (000)	Percent	Number (000)	Percent
Total	10,791	100.0	4,253	100.0	6,538	100.0
Households With Children	6,698	62.1	4,178	98.2	2,520	38.5
Single Female Adult	4,247	39.4	3,170	74.5	1,077	16.5
Single Male Adult	230	2.1	116	2.7	114	1.7
Multiple Adults	1,896	17.6	845	19.9	1,051	16.1
Other	326	3.0	47	1.1	278	4.3
Households With no Children	4,093	37.9	75	1.8	4,018	61.5

Source: 1993 Food Stamp Quality Control sample.

Table 4.4 -- Average Values of Selected Items for Single-Mother Households by AFDC Status, 1993

AFDC Status	Average Values							Monthly Income as a Percent of Poverty Guideline (Percent)
	Age of Single Mother ^a (Years)	Age of Youngest Child (Years)	Household Size (Persons)	Number of Children (Persons)	Monthly AFDC Benefit (Dollars)	Monthly Gross Income (Dollars)	Monthly Food Stamp Benefit (Dollars)	
Single-Mother Households ..	30.5	4.9	3.0	2.0	274	490	216	50.8
With AFDC	30.0	4.5	3.0	2.0	368	457	224	47.2
With no AFDC	32.0	5.8	3.0	2.0	0	587	194	61.5

^a Single mothers are defined as females over age 17 living with children and no other adults.

Source: 1993 Food Stamp Quality Control sample.

other respects. For one, single-mother FSP/AFDC households had considerably lower monthly incomes, on average, than other single-mother households (\$457 and \$587, respectively). Secondly, single-mother FSP/AFDC households received substantially higher monthly food stamp benefits (\$224), on average, than other single-mother households (\$194).

Single mothers living in households that received food stamps and AFDC benefits also tended to be younger than their non-AFDC counterparts (appendix table B-7). Single mothers that participated in the FSP and in the AFDC program were 2 years younger, on average, than single mothers not participating in the AFDC program (30 years old and 32 years old, respectively). More than one-third of FSP/AFDC single mothers were between 18 and 25 years old, and almost 60 percent were younger than 30 years old.

Single-mother FSP/AFDC households also tended to contain relatively young children (table 4.5 and appendix table B-8). Approximately 44 percent of these households contained an infant (age 2 or younger), and almost 70 percent contained a preschool-age child (younger than 5). In contrast, approximately one-third of other single-mother food stamp households contained an infant, and 56 percent contained a preschool-age child. The average age of the youngest child in a single-mother FSP/AFDC household was 4.5 years, just under school-age, while the average age of the youngest child in single-mother FSP/non-AFDC households was almost 6 years old, the age that children typically enter first grade.

The percentage of single-mother food stamp households that participated in the AFDC program varied considerably across States and territories, ranging from 29 percent in the Virgin Islands to 95 percent in California (appendix table B-9). The average AFDC benefit received by single-mother FSP/AFDC households also differed substantially by location. On average, single-mother FSP/AFDC households located in Alabama, Arkansas, Louisiana, Mississippi, South Carolina, Tennessee, and Texas received relatively low AFDC benefits, less than \$200 per month. In contrast, single-mother FSP/AFDC households in Alaska, California, Connecticut, and Hawaii received much higher AFDC benefits, at least \$550 each month. In each of these high-benefit States and in the District of Columbia, Oklahoma, Pennsylvania, and Rhode Island, AFDC benefits accounted for more than 90 percent of single-mother FSP/AFDC households' monthly income.

On average, one out of every five single-mother food stamp households had earned income, and the average earnings of these households was \$595 per month. This proportion varied by State, ranging from 6 percent of all single-mother food stamp households in West Virginia, to 43 percent of the single-mother food stamp households in South Dakota. Notably, in States with low maximum AFDC benefit levels (less than \$250), such as Alabama, Arkansas, Mississippi, South Carolina, and Texas, relatively high percentages of single-mother food stamp households had earned income (over 30 percent). In addition, in States with high maximum AFDC benefit levels (over \$500), such as California, Connecticut, Washington, New York, Rhode Island, and Massachusetts, less than 15 percent of single-mother food stamp households had earned income. Single-mother food stamp households in Guam had the highest average monthly earnings (\$873), and those in West Virginia had the lowest (\$408).⁵

⁵Averages are over households with earnings.

Table 4.5 -- Distribution of Participating Single-Mother Households by AFDC Status and Age Group of Youngest Child, 1993

Age Group of Youngest Child	All Single-Mother Households		Single-Mother Households With AFDC		Single-Mother Households With no AFDC	
	Number (000)	Percent	Number (000)	Percent	Number (000)	Percent

School-age (5-17 years)	1,490	35.1	1,019	32.1	471	43.7

Source: 1993 Food Stamp Quality Control sample.

FSP/GA HOUSEHOLDS

GA programs provided benefits to only a small proportion of the food stamp caseload in FY93 (table 4.1). Specifically, in an average month, 809,000 food stamp households, approximately 8 percent of the entire food stamp caseload, received GA benefits. These households received an average monthly GA benefit of \$233 (table 4.6).

Economic Characteristics

Food stamp households that also received GA benefits had an average gross income of \$348 per month, and they received an average monthly food stamp benefit of \$120, reflecting their small size (1.5 persons, on average).

FSP/GA households were poorer than other food stamp households (appendix table B-2). They had considerably lower average monthly incomes than other food stamp households (\$348 and \$501, respectively), and they had, on average, considerably lower countable resources than other food stamp households (\$23 and \$81, respectively). In addition, poverty measures, which account for differences in household size and location, show that a relatively high percentage of FSP/GA households had incomes below the poverty guideline, compared with other food stamp households (96 percent and 91 percent, respectively) (appendix table B-10). FSP/GA households, on average, had incomes that were 51 percent of the poverty guideline, while other food stamp households had incomes that were 56 percent of the poverty guideline, on average.

Demographic Characteristics

Almost 80 percent of FSP/GA households contained an adult living alone, and in the majority (56 percent) of these households, this adult was a male (table 4.7). In contrast, less than 30 percent of other food stamp households consisted of a single adult, and in the majority of these households, this adult was a female. A small proportion (14 percent) of FSP/GA households contained children. The majority of these GA households with children (62 percent) contained more than one adult. In contrast, 66 percent of food stamp households that did not participate in the GA program contained children, and less than 30 percent of these households contained multiple adults. Approximately 13 percent of FSP/GA households contained an elderly member, and 8 percent contained a disabled member.

FSP/GA households tended to be headed by someone slightly older than the heads of other food stamp households (appendix table B-12). The majority of FSP/GA heads of households were between 36 and 59 years old, while the majority of heads of other food stamp households were between 16 and 35 years old. The average age of FSP/GA heads of households was 42 years old, compared with 41 years old for other food stamp heads of households.

Food stamp household participation in a GA program varied by geographic location (appendix table B-13). Food stamp households in urban areas were considerably more likely to receive GA benefits than food stamp households in rural areas. Specifically, almost 9 percent of food stamp households in urban areas participated in a GA program, compared with only 4 percent in rural areas. In addition, food stamp households in the Northeast were more likely than those in any other region to receive GA benefits, while almost none (1 percent) of the food stamp households in the South received GA benefits.

Table 4.6 -- Average Values of Selected Items by GA Status, 1993

GA Status	Average Values				
	Monthly Income as a Percent of Poverty Guideline (Percent)	Monthly Food Stamp Benefit (Dollars)	Monthly GA Benefit (Dollars)	Household Size (Persons)	Age of Household Head (Years)

ACRONYMS AND DEFINITIONS FOR USE WITH APPENDICES

ACRONYMS AND DEFINITIONS FOR USE WITH APPENDICES

ACRONYMS

AFDC - Aid to Families with Dependent Children
GA - General Assistance
SSI - Supplemental Security Income
E&T - Employment and Training Program
FSP - Food Stamp Program
TFP - Thrifty Food Plan
IRCA - Immigration Reform and Control Act
UI - Unemployment Insurance

DEFINITIONS

Alien. Participant who is: (1) accorded permanent resident status under IRCA, (2) a lawful temporary resident under IRCA, (3) accorded refugee status, (4) granted political asylum, (5) a nonimmigrant admitted for a specified period, (6) granted a stay of deportation, (7) a Mexican citizen with a 'border' card, or (8) an undocumented alien.

Children. Age 17 or less.

Countable Resources. Cash on hand, assets which can be easily converted to cash, such as money in checking or savings accounts, savings certificates, stocks or bonds, and lump sum payments. They also include some nonliquid assets, although the family home, one or more family vehicles if necessary to transport disabled persons or to produce income, and business tools or property are not counted. See also *Resource Limit*.

Deductions. Allowable deductions from a household's gross monthly income to arrive at FSP net monthly income. The deductions shown in the tables are those to which households were entitled. Some of the deductions may not have been used, however, before a household reached zero net income status. Therefore, total deductions do not equal the difference between gross and net income amounts. See also *Total Deduction*, *Standard Deduction*, *Earned Income Deduction*, *Dependent-care Deduction*, *Excess Shelter Deduction*, *Medical Deduction*, and *Standard Deduction*.

Dependent-care Deduction. Deduction received by food stamp households for expenses involved in caring for dependents while other members work, seek employment, or go to school. The deduction was subject to a maximum of \$160 per dependent per month in fiscal year 1993. See also *Deductions*.

Disabled Persons. Participants who receive SSI but are not over age 59.

Earned Income Deduction. Deduction received by households with earnings, equal to 20 percent of the combined earnings of household members. See also *Deductions*.

Earned Income. Includes wages, salaries, self-employment, and farm income.

Elderly. Adults over age 59.

Employed Full Time. Employed at least 30 hours per week or receiving weekly earnings equal to or greater than the Federal minimum wage multiplied by 30 hours. This estimate is based on an employment status variable.

Employed Part Time. Employed less than 30 hours per week.

Employment and Training (E&T). Refers to employment and training services received under FSP E&T programs. Services provided include work experience, educational programs, and job search training.

Entrant Households. Includes households newly certified in July or August, 1993.

Excess Shelter Deduction. Deduction received by households with shelter costs, equal to those shelter costs that exceed 50 percent of the household's countable income after all other potential deductions are subtracted from gross income. There is a limit on the shelter deduction for households that do not contain elderly or disabled members. See appendix F. See also *Deductions*.

Exempt from Work Registration. See Work Registration Status Definitions and Notes below.

Expedited Service Households. Households which initially received expedited service for the certification period in effect in July or August, 1993.

Gross Income. Total monthly income of household in dollars, before applying deductions.

Gross Income Limit. Food stamp program gross monthly income eligibility standards, determined by household size; equal to 130 percent of the poverty guidelines. See appendix E.

Households With Preschool Age Children. Households with at least one member less than age 5.

Households With Elderly. Households with at least one member age 60 or more.

Households With Elderly or Disabled. Households where at least one member is age 60 or more, or at least one member receives SSI and no member is age 60 or more.

Households With School Age Children. Households with at least one member age 5 to 17.

Households With Disabled. Households with SSI income and no member age 60 or more.

Households With Children. Households with at least one member age 17 or less.

Initial Certification Households. Includes both households certified for the first time within the currently certified period and previously certified households which have not received benefits for at least 30 days.

Maximum Benefit. Based on a percentage of the cost of the Thrifty Food Plan in the preceding June for a reference family of 4, rounded to the lowest dollar increment. Maximum benefit varies by region. See appendix G.

Medical Deduction. Deduction available to households that contain elderly or disabled members, equal to all medical expenses incurred by the elderly or disabled person that exceed \$35. See p.4. See also *Deductions*.

Minimum Benefit. \$10 for one- or two-person households.

Net Income. Total monthly income of household in dollars, after applying deductions.

Net Income Limit. Food stamp program net monthly income eligibility standard, determined by household size. See appendix E.

Nonelderly Adults. Adults age 18 to 59.

Not Employed. Not working and not looking for work, and therefore not part of the labor force.

Other Alien. A lawful temporary resident under IRCA, an alien accorded refugee status, an alien granted political asylum, a nonimmigrant admitted for a specified period, an alien granted a stay of deportation, a Mexican citizen with a 'border' card, or an undocumented alien. See also *Permanent Resident Alien*.

Permanent Resident Alien. An immigrant accorded permanent resident status or a lawful permanent resident under IRCA. See also *Other Alien*.

Poverty Guideline. The 1993 poverty guidelines issued by the Department of Health and Human Services and published in the 1992 Federal Register. These guidelines reflect changes in the CPI-U and are used for administrative purposes such as determining eligibility for the FSP. The Bureau of the Census establishes other poverty thresholds which are used primarily for statistical purposes. See appendix D.

Preschool Age Children. Less than 5 years old.

Public Assistance. Includes Aid to Families with Dependent Children (AFDC) and General Assistance (GA).

Resource Limit. For most households the resource limit was \$2,000 in fiscal year 1993. Households with at least one member age 60 or older, however, were allowed up to \$3,000 of resources. See also *Countable Resources*.

Rural. A household is considered to be located in a rural area if the county in which its local food stamp agency is located is not in a Metropolitan Statistical Area as defined by the Census Bureau.

School Age Children. Children age 5 to 17.

Shelter Deduction. See Excess Shelter Deduction.

Standard Deduction. Deduction received by all households, which varies by area to reflect price differences between areas. See appendix F. See also *Deductions*.

Student. Participant age 18 years or older enrolled at least half time in a recognized school, training program, or institution of higher education.

Thrifty Food Plan. Market basket of goods based on an economical and nutritious diet, adjusted for household size and composition. Used to determine maximum food stamp benefit amounts.

Total Deduction. Includes earned income, dependent-care, excess shelter, medical, and standard deductions to which the FSP household is entitled. In some cases this exceeds the amount used before net income reaches zero. See also *Deductions*.

Unearned Income. Includes Aid to Families with Dependent Children (AFDC), General Assistance (GA), Supplemental Security Income (SSI), Social Security, Unemployment Income, Veterans' Benefits, Workers' Compensation, Other Government Benefits, Household Contributions, Household Deemed Income, Educational Loans, Child Support Enforcement Payments, and other unearned income.

Unemployed. Not working but looking for work, and therefore part of the labor force.

Urban. A household is considered to be located in an urban area if the county in which its local food stamp agency is located is in a Metropolitan Statistical Area as defined by the Census Bureau.

Work Registration Status Definitions and Notes

Required to register for work. Able-bodied food stamp household heads required to register for work under the FSP or JOBS.

Exempt from work registration. Food stamp household heads not required to register for work for one or more of the reasons listed below.

Under the required age. Persons less than age 18. (However, the Food Stamp Act of 1977, as amended, requires 16- and 17-year-olds who are household heads and who are not in school or otherwise exempt to register for work.)

Over the required age. Persons age 60 or more.

Pregnant. This exemption applies only to the AFDC program. States may exempt work registrants from participation in FSP E&T programs for this reason, but not from FSP work registration.

Caretaker. For the FSP, this exemption includes both caretakers of children under 6 and caretakers of children under 18 where another able-bodied parent is registered for work or exempted because of employment; for the AFDC program, this exemption applies to caretakers of children under 3 (or age 1 as a state option).

Employed full time. Employed at least 30 hours per week or receiving weekly earnings equal to or greater than the Federal minimum wage multiplied by 30 hours. This estimate is based on the work registration variable.

Student. Enrolled at least half time in a recognized school, training program, or institution of higher education.

Program not offered. This exemption applies only to the AFDC program. States may exempt work registrants from participation in FSP E&T programs for this reason, but not from FSP work registration.

APPENDIX A

CROSSWALK AND DETAILED TABLES
OF FOOD STAMP HOUSEHOLD CHARACTERISTICS

CROSSWALK

The format of the appendix A tables in this report differs significantly from that of the appendix A tables in previous reports. The tables have been changed to allow the presentation of data in a more efficient and convenient format. This crosswalk enables the reader to locate information found in the tables of previous reports in this report. For each of the old tables, this crosswalk lists the number of the new table containing the same information.

A-49	Distribution of participating households with and without disabled for selected characteristics	A-20

Children

A-50	Distribution of participating households and benefits for households with children, school age children, preschool age children, and no children	A-1
A-51	Average value of selected characteristics for participating households with children, school age children, preschool age children, and no children	A-2
A-52	Distribution of participating households with children, school age children, preschool age children, and no children for selected characteristics	A-20

AFDC

A-53	Distribution of participating households, benefits and participants for households with and without AFDC income	A-1
A-54	Average value of selected characteristics for participating households with and without AFDC income ..	A-2
A-55	Distribution of participating households with and without AFDC income for selected characteristics ...	A-22

Survey Comparisons: 1980 through 1993

A-56	Comparison of average value of selected characteristics for August 1980 - summer 1993	A-32
A-57	Comparison of percentage of participating households with selected characteristics for August 1980 - summer 1993	A-31

DETAILED TABLES OF FOOD STAMP HOUSEHOLD CHARACTERISTICS

Table A-1. Distribution of Participating Households, Persons, and Benefits by Household Composition, Income Source, and Food Stamp Benefit Amount

Household Characteristic	Food Stamp Households		Participants in Households with Household Characteristic		Monthly Food Stamp Benefits	
	Number (000)	Percent	Number (000)	Percent	Dollars (000)	Percent
Total	10,910	100.0	28,183	100.0	1,849,814	100.0

APPENDIX D

POVERTY INCOME GUIDELINES FOR 1993

Table D. Poverty Income Guidelines for 1993^a

Household Size	Continental United States, Guam, and the Virgin Islands	Alaska	Hawaii
1	\$6,810	\$8,500	\$7,830
2	9,190	11,480	10,570
3	11,570	14,460	13,310
4	13,950	17,440	16,050
5	16,330	20,420	18,790
6	18,710	23,400	21,530
7	21,090	26,380	24,270
8	23,470	29,360	27,010
Each Additional Member	+2,380	+2,980	+2,740

^aThese poverty guidelines are established by the Department of Health and Human Services and are used for administrative purposes such as determining eligibility for the FSP. These guidelines reflect changes in the CPI-U through calendar year 1992. The Bureau of the Census establishes different poverty thresholds which are used primarily for statistical purposes.

Source: 57 Federal Register 31, February 14, 1992.

APPENDIX E

**FSP MAXIMUM ALLOWABLE GROSS AND NET MONTHLY
INCOME ELIGIBILITY STANDARDS
IN SUMMER 1993**

Table E-1. FSP Maximum Allowable Gross Monthly Income Eligibility Standards in Summer 1993^a

Household Size	Continental United States, Guam, and the Virgin Islands	Alaska	Hawaii
1	\$738	\$921	\$849
2	996	1,244	1,146
3	1,254	1,567	1,442
4	1,512	1,890	1,739
5	1,770	2,213	2,036
6	2,027	2,535	2,333
7	2,285	2,858	2,630
8	2,543	3,181	2,927
Each Additional Member	+258	+323	+297

^aThe FSP gross income standards are in effect from October 1, 1992 - September 30, 1993.

Source: U.S. Department of Agriculture.

Table E-2. FSP Maximum Allowable Net Monthly Income Eligibility Standards in Summer 1993

Household Size	Continental United States, Guam, and the Virgin Islands	Alaska	Hawaii
1	\$568	\$709	\$653
2	766	957	881
3	965	1,205	1,110
4	1,163	1,454	1,338
5	1,361	1,702	1,566
6	1,560	1,950	1,795
7	1,758	2,199	2,023
8	1,956	2,447	2,251
Each Additional Member	+199	+249	+229

*The FSP net income standards are equal to the Department of Health and Human Services poverty income guidelines (appendix D) divided by 12, rounded up to the nearest dollar. These standards are in effect from October 1, 1992 - September 30, 1993.

Source: U.S. Department of Agriculture.

APPENDIX F

**VALUE OF STANDARD, MAXIMUM DEPENDENT-CARE,
AND EXCESS SHELTER EXPENSE DEDUCTIONS IN THE
CONTINENTAL UNITED STATES AND
OUTLYING AREAS IN SUMMER 1993**

Appendix F. Value of Standard, Maximum Dependent-Care, and Excess Shelter Expense Deductions in the Continental United States and Outlying Areas in Summer 1993^a

Area	Standard	Maximum Dependent Care ^b	Excess Shelter ^c
Continental United States . .	\$127	\$160	\$200
Alaska	216	160	349
Hawaii	179	160	286
Guam	254	160	243
Virgin Islands	112	160	148

^aThese standards are in effect from October 1, 1992 - September 30, 1993.

^bThe dependent-care deduction limit is \$160 per dependent.

^cLimit on excess shelter expense deduction for households with no member age 60 or more and no disabled member.

Source: U.S. Department of Agriculture.

APPENDIX G

**VALUE OF MAXIMUM FOOD STAMP BENEFIT IN
THE CONTINENTAL UNITED STATES AND
OUTLYING AREAS IN SUMMER 1993**

Table G. Value of Maximum Food Stamp Benefit in the Continental United States and Outlying Areas in Summer 1993^{a,b}

^aThe maximum benefit values are effective from October 1, 1992 to September 30, 1993 and are based on 103 percent of the cost of the Thrifty Food Plan in the preceding June for a reference family of four, rounded to the lowest dollar increment. These values did not change for the Continental U.S., Guam, and the Virgin Islands between fiscal year 1992 and fiscal year 1993.

^bDue to the unusual nature of Alaskan terrain and climate, areas outside major urban centers are less accessible to food distributors. Therefore, the value of the maximum benefit accounts for this added expense by splitting the Thrifty Food Plan into separate components: Rural I, Rural II, and Urban.

APPENDIX H
SOURCE AND RELIABILITY OF ESTIMATES

The Sample

The estimates in this report are derived from a sample of households selected for review as part of the Integrated Quality Control System (IQCS). This system is an ongoing review of food stamp household circumstances designed to determine (1) if households are eligible to participate or are receiving the correct benefit amount and (2) if household participation is correctly denied or terminated. The IQCS is based on a national probability sample of approximately 60,000 participating food stamp households, and on a somewhat smaller number of denials and terminations. The national sample of participating households collected in the IQCS is stratified by the 50 States, the District of Columbia, Guam, and the Virgin Islands. Annual required State samples range from a minimum of 300 to 2,400 reviews, depending on the size of the State's caseload. State agencies select an independent sample each month that is generally proportional to the size of the monthly participating caseload.¹

The estimates presented in appendix A of this report are derived from the summer 1993 food stamp IQCS sample of participating households. To ensure an adequate sample size, both July and August samples comprise the data for summer 1993. The estimates presented in appendixes B and C of this report are derived from the samples for all months of the fiscal year 1993 food stamp IQCS sample of participating households.

Target Universe

The target universe of this study included all participating households (active cases) subject to quality control review in the 50 States, the District of Columbia, Guam, and the Virgin Islands.²

While almost all participating food stamp households are included in the target universe, certain types not amenable to review are not included. Specifically, the universe includes all households receiving food stamps during a review period except those in which the participants (1) died or moved outside the State; (2) received benefits by a disaster certification authorized by FCS; (3) were under investigation for FSP fraud (including those with pending fraud hearings) and/or were appealing a notice of adverse action when the review date fell within the time period covered by continued participation pending a hearing; or (4) received restored benefits in accordance with the State manual, but who were otherwise ineligible. The sampling unit within the universe each month is the active food stamp household as specified in FCS regulations.

Weighting

The estimates for summer 1993 in this report are based on a sample of 9,504 valid observations, and the estimates for fiscal year 1993 are based on a sample of 56,822 valid observations. The sample records have been weighted based on the number of households participating in the food stamp

¹Several States have integrated the Food Stamp, AFDC, and Medicaid QC sample selection and review process. In these States, monthly sample sizes are not necessarily proportional to monthly caseload sizes.

²Participating households in Guam and the Virgin Islands are included in the target universe for the first time this year. Prior to fiscal year 1993 our universe excluded households in those areas.

program in each month in fiscal year 1993, as reported to FCS³. Thus, when the sample is weighted it contains the total number of households that actually participated in the Food Stamp Program over any given time period. A separate person-level weight is not created, however. Therefore, although the number of households in the weighted sample is equal to the number of households found in program operations data provided by FCS, the number of participants in the sample is not exactly equal to the number in program data. Specifically, when the average size of the households in the sample is larger than the average size of the households in the entire food stamp caseload, as was the case in both summer and fiscal year 1993, the number of participants is overstated.

Comparison to Participation Data

The following data present a comparison of the quality control sample-based estimates to aggregate program participation data for summer 1993 and fiscal year 1993:

Average Monthly Value	Summer 1993		Fiscal Year 1993	
	Program Data	IQCS Sample	Program Data	IQCS Sample
Number of households	10,909,759	10,909,759	10,791,076	10,791,076
Number of participants	27,250,897	28,183,239	26,982,966	27,594,907
Value of benefits	\$1,841,943,636	\$1,849,813,625	\$1,834,762,035	\$1,834,117,243
Average household size	2.50	2.58	2.50	2.56
Average bonus per person	\$67.59	\$65.64	\$68.00	\$66.47

Income Decision Rule

Several household-level income and deduction variables are both reported and can be calculated by summing across reported person-level variables. Gross income is the key variable, since the earned income and excess shelter expense deductions and net income depend on gross income, and benefit levels depend on net income. The data on which this report is based were edited to achieve internal consistency. The mean values for selected variables broken out by their reported and calculated values are presented in appendix table H-1 for summer 1993 and in appendix table H-2 for fiscal year 1993.

Completion Rates

Failure to complete reviews for all cases subject to review can bias the sample results if the characteristics of unreviewed households are significantly different from those of reviewed households. While there are no direct measures of such differences, the ratio of complete reviews to total sample cases selected for review provides an indication of the magnitude of any potential bias. The expected number of cases subject to review in the two-month summer sample is based on one-sixth of all cases reported as subject to review during the twelve-month fiscal year (October 1992 - September 1993).

³Case record sample weights of States that had disproportionately stratified quality control sample designs were adjusted to reflect the stratification.

However, since summer caseloads are smaller than caseloads during other times of the year, this approach results in a slight overestimation of the total expected number, and thus in a slight underestimation of the completion rate for the summer 1993 sample. The number of cases subject to review, the number of valid observations, and the estimated completion rates for summer 1993 and fiscal year 1993 are as follows:

	IQCS Sample	
	Summer 1993	Fiscal Year 1993
Number of cases subject to review	10,539	63,040
Number of cases completed	9,512	56,881
Estimated completion rate	90.3%	90.2%

APPENDIX I
SAMPLING ERROR OF ESTIMATES

Sampling Error

The estimates of the characteristics of food stamp households contained in this report are based on a sample of households. The summer 1993 estimates are based on a summer sample (an average of July and August). Since the estimates are based on a sample, they are subject to statistical sampling error.

One important indicator of the magnitude of the possible sampling error associated with a given estimate is its standard error. Standard errors measure the variation in estimated values that would be observed if multiple replications of the sample were drawn. The magnitude of the standard errors depends on (1) the degree of variation in the variable within the overall population from which the sample has been drawn; (2) the design of the sample, including such issues as stratification and sampling probabilities; and (3) the size of the sample on which the estimate is based.

In this appendix, we present estimates of the standard errors associated with key variables for the statistics, and we outline methods for estimating the standard errors of other statistics for which standard errors have not been directly calculated.

Standard Errors and Confidence Intervals

The estimates presented in appendix A are based on the summer 1993 Food Stamp Quality Control sample. For these estimates, the standard error of estimates of proportions, s_p , based on simple random samples is given by the formula:

$$(1) s_p = \sqrt{p(1-p)/(n-1)} ,$$

where p is the sample estimate of the proportion and n is the sample size.

The standard error of estimated numbers of households, s_N , based on simple random samples is given by the following formula:

$$(2) s_N = N \sqrt{p(1-p)/(n-1)} ,$$

where N is the number of households in the population.

These formulas for the standard errors of the estimates based on simple random samples do not necessarily provide an accurate estimate for more complex stratified samples such as the stratified sample design used for this study. In this appendix, estimates produced by the formulas above are referred to as "naive standard errors". More accurate standard errors are provided for key estimates by directly calculating their standard errors through a replicate method as discussed below.¹

¹Standard errors have been estimated using the replicate sample method described in Leslie Kish, *Survey Sampling*, 1965, pp. 127-128. Under the replicate sample method, the sample is divided into random subsamples, and the variance of the mean of any given variable in the full sample is based on the variance of the means for that variable across the subsamples. In implementing this approach, the samples used in the estimation work were divided into 40 replicate subsamples.

Standard errors can be used to construct confidence intervals for estimated variables. A confidence interval is a range of values that will contain the true value of an estimated characteristic with a known probability. For instance, a 95-percent confidence interval extends approximately two standard errors above and below the estimated value for a characteristic, and 95 percent of all confidence intervals will contain the true value.

The following discussion presents estimated standard errors for a selected set of key estimates using the replication method. It then presents a simple method for approximating standard errors of estimated numbers of households and percentages for the national caseload when individual standard errors have not been estimated.

Standard Errors of Estimated Numbers of Households

The standard errors for selected estimates of food stamp households in summer 1993 are shown in table I-1. These standard errors can be used to compute the 95-percent confidence interval for the estimated number of households with a particular characteristic. For example, the estimate in table I-1 of the number of elderly households with zero net income has a standard error of 21,000, and therefore, the 95-percent confidence interval extends from 125,000 to 209,000, around the point estimate of 167,000.² With such a confidence interval, 95 percent of all intervals constructed in this fashion will contain the true value of the variable.

For standard errors not shown in table I-1, the approximate standard error, S_E , of an estimated number of households for summer 1993 can be obtained by the use of the formula:

$$(3) \quad S_E = s_N \times d \times f,$$

where s_N is the naive standard error from either equation (2) above or from table I-2, d is the average design effect of 1.8, and f is an adjustment factor from table I-5 that potentially can improve the approximation by partially accounting for the variation in design effects across subgroups of the sample.³ The average design effect is the average increase in the size of the standard error estimated by the replicate method over that of the naive standard error appropriate for a simple random sample. Use of the adjustment factor f will generally improve the approximation when the base of the estimated percentage or number and the characteristic used in defining the percentage or total are quite similar to the bases and characteristics shown in table I-5. In other cases, f should be ignored by setting it to 1.0.⁴

²Calculated by rounding to the nearest thousand; $(167 - (2 \times 21)) = 125$ and $(167 + (2 \times 21)) = 209$.

³The average design effect reflects the loss of precision resulting from the existence of different sampling rates in different strata of the IQCS sample. It is the ratio of the average standard error computed by the replication method to the average naive standard error across all cells of table I-5.

⁴Table I-5 presents the adjustment factors for various categories of households defined by household composition and income receipt. For each household category, the adjustment factor "f" is the ratio of the design effects for the sample of that category of households to the design effects for the entire sample.

For example, to obtain the approximate standard error of the number of households containing an elderly person with zero net income, the first step is to obtain the size of the estimate. As shown in appendix table A-20, 166,000 elderly households have zero net income. The next step is to obtain the naive standard error from either equation (2) or less accurately from table I-2. Using equation (2), the value is 13,200 households.⁵ Multiplying 13.2 times the design factor *d* of 1.8 produces the first approximation of 23.76. In this case, the same base for the number of households (i.e., with elderly) and the same characteristic (i.e., zero net income) are defined in table I-5. Consequently, using the *f* factor from table I-5 should improve the approximation. Multiplying the first approximation of 23.76 times the adjustment factor of 1.174 from table I-5 produces a second approximation of 27.89. In this case, the approximation can be compared with the specific standard error estimate from table I-1, 20,970. The second approximation happened to be overestimated in this case, but is closer than the naive standard error of 13.2 thousand (the naive standard error does not account for sample design effects). However, it is not an improvement over the estimate based only on the average design effect (23.76).

Standard Errors of Estimated Percentages

The standard errors for selected estimated percentages of food stamp households in summer 1993 are shown in table I-3. As discussed above, these standard errors can be used to compute the 95-percent interval for the estimated percentage. For example, the estimate in table A-20 of the percentage of households with children with zero gross income (4.4 percent) has a standard error of .39 (table I-3), and therefore, the 95-percent confidence interval extends from 3.6 percent to 5.2 percent—around the point estimate of 4.4 percent.⁶

For estimated percentages in summer 1993 not shown in table I-3, the approximate standard error, S_E , can be obtained by the use of the formula:

$$(4) \quad S_E = s_p \times d \times f$$

where s_p is the naive standard error from equation (1) above or less accurately from table I-4, *d* is the average design effect of 1.8, and *f* is an adjustment factor from table I-5 to improve the approximation as discussed above.

For example, to obtain an approximate estimate of the standard error for the percentage of households with children that have zero net income, the first step is to obtain the estimated percentage and the size of the base for the estimated percentage. From appendix table A-1, we see that 6,769,000 households have children. As shown in appendix table A-20, 16.0 percent of

⁵Calculated as:

$$1,737 \times \sqrt{((166/1,737) \times (1 - (166/1,737))/1,492)} = 13.2,$$

where 1,737 is the estimated number of elderly households, 166 is the estimated number of households with elderly with zero net income, and 1,492 is the sample size of elderly households. Table I-4 is accurate only for the full sample size of all food stamp households.

⁶Calculated by rounding to the nearest tenth of a percent as: $(4.4 - (2 \times .39)) = 3.6$, and $(4.4 + (2 \times .39)) = 5.2$.

households with children have zero net income. The next step is to obtain the naive standard error from equation (1). Using equation (1), the square root of $(.160 \times .840)/(5,994-1) = .474$ percent. Multiplying the naive standard error of .474 times the average design factor of 1.8 times the specific adjustment factor of .919 from table I-5 produces an adjusted approximation of .784. In this case, the approximation can be compared with the specific standard error estimate from table I-3, .585.

Standard Errors of Estimated Means

The standard errors for selected estimated means in summer 1993 are provided in table I-6. These standard errors can be used to compute a 95-percent confidence interval. For example, the standard error for average gross income for all food stamp households in summer 1993 as shown in table I-6 is 4.49, and its mean is \$501. Therefore, a 95-percent confidence interval extends between approximately \$492 and \$510.⁷

Generalized approximation methods such as those used above work well for standard errors of estimated numbers and percentages, since the standard errors depend only on the sample size, the estimated proportion, and the design effects. Generalized methods are less appropriate for standard errors of means, since the standard error depends on the variance as well as the sample size and design effects. However, a rough approximation of the likely magnitude of standard errors of means not included in table I-6 can be obtained from table I-7, which shows the standard error as a percent of the mean value for all food stamp households and successively smaller subsets of households. In this table, the approximate standard errors as a percent of the mean value are shown as the average across the 12 variables from table I-6. The lowest and highest values across the 12 variables for each subset of households are also shown to give an indication of the quality of the approximation provided by the standard error expressed as a percent of the mean value. These standard errors include the design effects as they were estimated using a replication method.

⁷Rounding to the nearest dollar, $(501 - (2 \times 4.49)) = 492$ and $(501 + (2 \times 4.49)) = 510$.

Table I-6. Standard Errors of Estimated Means, Summer 1993^a

Base of Estimated Mean	Households With											
	Gross Income	Net Income	Benefits	All Deductions	Total Resources	Household Size	Certification Period	Earnings ^b	AFDC & GA ^b	SSI ^b	Dependent Care Cost ^b	Shelter Deduction ^b
All FSP Households . .	4.494	4.051	1.298	2.180	3.882	0.020	0.047	11.233	4.582	5.599	7.689	1.640
With Elderly	7.418	8.061	2.137	5.337	15.903	0.032	0.133	34.894	17.700	8.288	10.841	5.758
Without Elderly	4.932	4.416	1.622	1.943	3.806	0.026	0.048	11.654	4.725	5.419	6.738	1.363
With Children	6.037	5.377	2.070	2.250	4.396	0.029	0.066	13.345	5.043	10.271	7.889	1.571
With School Children .	8.977	8.068	2.744	3.231	5.268	0.046	0.084	14.868	7.185	10.481	11.148	2.063
Without Children	5.971	4.521	1.386	4.092	6.967	0.010	0.086	21.733	6.874	6.097	c	4.001
With Earnings	11.022	10.043	3.300	3.950	8.420	0.051	0.153	11.233	15.298	17.170	8.209	3.355
With Disabled	10.763	12.823	3.235	6.958	8.748	0.060	0.107	40.353	7.965	5.419	5.820	7.370

^aStandard errors were estimated using the replication method.

^bFor households with a nonzero amount.

^cSample size too small to make an estimate.

Source: Summer 1993 Food Stamp Quality Control sample.

Table I-7. Range of Standard Errors of Mean Amounts Expressed as a Percentage of the Mean Amount^a, Summer 1993

Number of Households in Base of Mean	Standard Error as Percent of Mean Amount		
	Average ^b	Lowest ^c	Highest ^d
10,910 (All FSP Households)	1.84	0.49	5.60
6,775 (Households With Children) .	2.23	0.72	8.35
2,270 (Households With Earnings) .	3.21	1.07	8.14
1,183 (Households With Disabled) .	4.19	1.26	14.04

^aStandard errors were from table I-6 and mean amounts from applicable text tables.

^bAverage standard error across all 12 variables in table I-6 expressed as a percent of the mean amount.

^cLowest of the standard errors across all 12 variables in table I-6 expressed as a percent of the mean amount.

^dHighest of the standard errors across all 12 variables in table I-6 expressed as a percent of the mean amount.
